## MAT 137

## Tutorial #15- Sequences February 27-28, 2017

- 1. Let  $\{a_n\}_{n=1}^{\infty}$  be a sequence. Write down the formal definition of the following concepts. You have already seen some of these in lecture.
  - (a) The sequence is convergent.
  - (b) The sequence is divergent.
  - (c) The sequence is divergent to  $\infty$ .
  - (d) The sequence is divergent to  $-\infty$ .
  - (e) The sequence is increasing.
  - (f) The sequence is decreasing.

- (g) The sequence is non-decreasing.
- (h) The sequence isn't decreasing.
- (i) The sequence is bounded above.
- (j) The sequence is not bounded above.
- (k) The sequence is bounded.

Note: Questions 1e, 1g and 1h are all different.

2. The following is a well-known result due to mathematician Stirling:

$$\lim_{n \to \infty} \frac{n!}{n^n e^{-n} \sqrt{2\pi n}} = 1$$

For this problem, you may assume we already know this formula is true. Use it to calculate the limits of the four sequences below.

(a) 
$$\lim_{n \to \infty} \frac{n! e^n}{n^{n+1/2}}$$

(c) 
$$\lim_{n \to \infty} \frac{(2n)!\sqrt{n}}{n!^2 4^n}$$

(b) 
$$\lim_{n \to \infty} \frac{(2n)!}{e^{-2n}(2n)^{2n}\sqrt{n}}$$

(d) 
$$\lim_{n \to \infty} \frac{\sqrt[n]{n!}}{n}$$
