James Huynh

Toronto, ON, Canada • on.jamesh@gmail.com • 437-370-7773 • LinkedIn • GitHub

Professional Summary

Software developer with a Computer Science background building full-stack applications, AWS data pipelines, and Python workflows. Recent work includes OCR, data processing, and cloud deployment.

Skills

Languages: **Python, JavaScript, Ruby, SQL, Java, PHP, C, R**
Technologies: **React, Rails, PostgreSQL, SQLite, MariaDB, Node.js, Redux, Git**
Cloud/DevOps: **AWS (Kinesis, Lambda, ECS, EC2, API Gateway), Docker, Linux, GCP, Nginx**

Education

George Brown Polytechnic — Sep 2025 – Aug 2026
Ontario College Graduate Certificate, Health Informatics — Toronto, ON

University of Toronto — Sep 2016 – May 2023
Honours Bachelor of Science, Computer Science — Toronto, ON

Experience

Full Stack Developer at **Overbond** — May 2019 – Aug 2020
Toronto, ON

- Developed full-stack features and REST APIs using **Rails**, **React**, and **PostgreSQL**
- Built real-time **AWS** data pipeline components with **Kinesis** and **Lambda** using financial market data to produce analytics within five seconds
- Overhauled **Python** workflows deployed with **Docker** in **Amazon ECS**
- Implemented real-time dashboards with **WebSockets** and **API Gateway**
- Resolved production issues across application code, databases, market data integrations, and **AWS** infrastructure in a small engineering team

Embedded Software Designer at **ExtentCom** — May – Aug 2018
Richmond Hill, ON

- Developed **C** and **Perl** tools for wireless devices, including radios, power meters and switches, with CRC error checking and RSA cryptography

Projects

msxp: MapleStory Classic EXP Tracker • msxp.pages.dev — Oct 2026
Toronto, ON

- Built a **Python** pipeline to extract player levels and EXP from public Twitch streams using Streamlink, FFmpeg, **Tesseract**, and **RapidOCR**
- Implemented **OCR** validation checks using character identity, game progression rules, and prior observations to prevent unreliable updates to player progress in **SQLite**
- Deployed a live EXP leaderboard with player history, level-up estimates, and **stream overlays**, supported by a **Python backend** hosted on a cloud server

HiT4EMR: OpenEMR Implementation Project — May – Aug 2026
Toronto, ON

- Managed OpenEMR on **AWS EC2** using **Docker**, **MariaDB**, and **Linux**, for a shared environment serving **30+ students**, including backups and synthetic data imports
- Built a **PHP OpenEMR module** using **SQL** to track student activity and chart sessions
- Tested FHIR R4 APIs with OAuth2 and simulated HL7 v2 workflows with synthetic data
